EDUCATION

Master of Science in Cyber Security, University of Denver **Expected Aug 2026**
Bachelor of Science in Computer Science, University of Illinois Chicago **May 2024**
Honor: 1st Place, Undergraduate Research Forum, UIC (2023)

TECHNICAL SKILLS

Security Operations: Splunk, ELK Stack, Suricata, Snort, Wireshark, Log Analysis, Threat Detection, Threat Hunting, Incident Response, MITRE ATT&CK, NIST CSF
Vulnerability & Application Security: Nessus, OpenVAS, Burp Suite, Nmap, SAST, DAST, AST Analysis, Penetration Testing, Coordinated Vulnerability Disclosure
Cloud & Identity: AWS (IAM, S3, KMS), GCP IAM, Okta, Google Workspace, Active Directory, GPO, Linux
Programming: Python, Bash, SQL, C, C++

EXPERIENCE

University of Denver, Facility and Service Associate, Denver, CO **Mar 2025 - Present**

- Monitor access control systems and investigate anomalies, supporting real-time incident identification and response.
- Document incidents and maintain structured reports aligned with audit and compliance standards.

CYBERSECURITY COMPETITIONS

Rocky Mountain Collegiate Cyber Defense Competition (RMCCDC), Selected for Regionals **Mar 2026**

- Defended enterprise infrastructure (Active Directory, DNS, IIS, FTP, Linux servers, firewalls, VPN) against an active professional Red Team while maintaining required service availability for scoring.
- Performed log analysis, threat detection, persistence removal, and live incident response; produced IR procedures and executive reports for White Team injects.

CyberForce Competition (U.S. Department of Energy), Team T-82 **Nov 2025**

- Defended a simulated ICS/OT environment (Active Directory, OpenPLC, HMI, database, web services) against live Red Team attacks while completing White Team incident response injects.
- Removed PAM backdoors, PHP webshells, and port-based persistence; hardened Windows and Linux systems; performed forensic log analysis using netstat, auth logs, and Windows Event Logs.

PROJECTS

Afterlife: Ghost Access Auditor *(Python, AWS, GCP, Okta, FastAPI)* github.com/desledishant10/afterlife

- Built cross-source identity graph auditor across AWS, GCP, GitHub, Okta, Google Workspace, and Vault; 11 detection rules ranked by blast radius.
- Shipped JSON, HTML, PDF, and SARIF reports plus FastAPI dashboard for SOC review; 250+ tests against mocked cloud APIs.

MCP-Scan: AI Agent Security Scanner *(Python, SAST, DAST)* github.com/desledishant10/mcp-scan

- Built static and dynamic vulnerability scanner for Model Context Protocol servers with 14 rules (SSRF, path traversal, shell injection, prompt injection, DNS rebinding, CORS).
- Found vulnerabilities in 5 PyPI servers including an Anthropic reference; demonstrated SSRF on AWS EC2 retrieving live IAM credentials; filed coordinated CVE-track disclosures.

Vex: Red Team Framework for AI Systems *(Python, LLM Security, MCP)* github.com/desledishant10/vex

- Built open-source red team framework probing LLMs, AI agents, MCP servers, and RAG pipelines for indirect tool injection, prompt extraction, Unicode smuggling, and jailbreaks.
- Composable detector stack (refusal, pattern, compliance, LLM-as-judge); Anthropic, OpenAI, and Ollama support; CI-native with exit-on-finding for build gating.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate, Coursera, Feb 2026
- Google Cloud Cybersecurity Professional Certificate, Coursera, Feb 2026
